- Frameworks (React e React Native | Angular)
- HTML5
- CSS3
- Javascript
- BootsTrap
- Programming Logic
- Versioning (GITHUB)

Languages

- Intermediate English
- Native Portuguese
- Basic Spanish

Experience

Project 1 - Real Estate

The idea came when a friend asked me how his page could look dynamic and up-to-date, one that had the look of Instagram stories. So through CSS and BootsTrap I got to accomplish such a feat for him and left the page stylized in such a way.

Project 2 - Digital Agenda

In this project it came with a difficulty of a family member. She could not manage her clients and her salon was always crowded crowded and there was no organization in the schedules. So I created the Digital Agenda, so the customers the web software and notified her via a web software and notify her via a message on the salon's WhatsApp. And on the customer's cell phone of the client there was a list on her storage location where it informs the time and the position of the in the service queue.

Project 3 - JustOneTime

In my workplace I have some procedures that take a long time to to finish and are very repetitive. So decided to create this app. With the automation, we gained a 75% agility and we were able to create the documents in just 15 minutes.
